

# NICE FRAME BVS

The NICE frame has many patented features that make it effective at carrying loads comfortably for military operations. It starts with great fitment, each size of our Futura Yoke has eight inches of adjustment to accommodate a wide range of torso lengths. This ensures the weight is kept off the shoulders and transferred to the hips. The design of the waistbelt keeps it in contact with the lumbar, even when not buckled. The framing allows for torsional movement, but its three vertical and horizontal composite stays are rigid in the vertical plane to transfer the load efficiently. Keep your pack secure over body armor, our BVS system stabilizes each side of the pack against your plates to maintain stability under heavy loads. The NICE frame gives military users durability, stability, and custom fit that increases operational success.

COYOTE

MULTICAM

## KEY FEATURES:

- 1 Three vertical and horizontal stays with full fabric panels that absorb shock and increase flexibility
  - 2 Top-down load transfer that comfortably handles the heaviest loads
  - 3 Futura Yoke that can easily adjust to most torso lengths
  - 4 Contour waistbelts and Outo lumbar system to keep that weight on the users hips and off their shoulders
- The BVS - Bolstered Ventilation Stability system, allows for stable secure fit when wearing body armor

## SPECS:

Weight: 2.1 kg (4.61 lbs)

Size: S, M, L

Berry Compliant
